

---

### Note:

It is important to do the following before you proceed to configure your mobile phone to access the Email Client Service.

- a) You need a POP3 enabled email account.
- b) To create a data account called **SunSurf Mobile**. **SunSurf Mobile** allows the phone to access the Internet and Email Client via the M1 network.

### Setting up SunSurf Mobile Data Account:

1. Go to **Main Menu** and select **Settings**.
2. Select **Connection**.
3. Select **Access Point**.
4. Press **Option** and select **New Access Point**.
5. Press soft key >
6. Select **Use default settings**.
7. **Connect Name:** SunSurf Mobile
8. **Data bearer:** GPRS
9. **Access point name:** press **Option** and select **Change**. Key in **sunsurf**.
10. **User name:** press **Option** and select **Change**. Key in **65**.
11. **Prompt password:** No
12. **Password:** leave it blank
13. **Authentication:** normal
14. **Homepage:** Leave Blank

### Email Client Set-up steps:

1. Go to **Menu**.
2. Select **Messaging**.
3. Scroll and select **Mail box**.
4. Select Yes to define mail box.
5. Select **Mailbox name** – Create a name for your mailbox. Eg. My Yahoo Mail
6. Scroll and select **Access point** in use.
7. Scroll and select “**sunsurf**” to be **default access point**.
8. Scroll and select **My mail address**.
9. Enter your email address E.g “xxx.yahoo.com.sg”.
10. Scroll and select **Outgoing mail server**.
11. Enter “smtp.miworld.com.sg”.
12. Scroll and select **User name**.
13. Enter your email login user name.
14. Scroll and select **Password**.
15. Enter your email login password.
16. Scroll and select **Incoming mail server**.
  - For Singnet customer, please enter **pop.singnet.com.sg**
  - For StarHub customer, please enter **pop.starhub.net.sg**
